Automatic Bird Scarers**

# PROPANE OR BUTANE POWERED AUTOMATIC BIRD SCARERS

## GUARDIAN-2 STANDARD

RO - GUARDIAN-2 functioneaza cu butan sau propan gaz ( butelie normale de gaz butan ), producand explozii puternice, sperand pasarile sau porci mistreti, urși, cerbi si orice alt animal care ar putea intra in zona agricola. Exploziile pot fi programate la interval de 1 minut pana la 30 minute. De asemenea puterea exploziei poate fi reglata de la 80 dB la 120 dB.

Suprafata care poate fi protejata este de 3-4 Ha

Dispozitivul se activeaza printr-un sistem piezo-electric; restul dispozitivului este mecanic, ce a ce il face foarte usor de folosit si fara alte probleme de functionare. Intregul Dispozitiv este galvanizat ( placat cu zinc ), fiind rezistent la apa si folosit pe orice vreme. Sunt fabricate in Spania, compania producatoare are peste 60 de ani de experienta, produsele fiind prezente la nivel international in peste 50 de tari, demonstrand calitatea si eficienta acestora.

## GUARDIAN-2 ECO

The GUARDIAN-2 ECO model runs on butane or propane gas. The sonic explosions it produces help to protect crops, fruit trees and any other areas from which you need to frighten away birds and/or any other animals that are harmful to crops. The sonic explosions can be adjusted to go off with the desired frequency, ranging from one minute to half an hour.

Thanks to the special configuration of its canon, the explosions are always at 120 decibels, protecting an area of between 3 and 4 hectares, always subject to the type of crop and orography. The machine activates with a piezo-electronic system and the fact that the rest of the machine is fully mechanical helps to keep any potential faults to a minimum. As is the case with all our models, the machine is zinc-plated, which means it will continue to work even in very adverse weather conditions. RO - Modelele Eco, functioneaza identic cu cel standard. Singura deosebire este ca puterea exploziilor este constanta 120 dB.

## GUARDIAN-2 SINGLE ROTARY

RO - Printre cele mai eficiente modele, cu picioare trepied, dispozitivul schimba directia automat, dupa fiecare explozie, rotinduse 90°

Picioarele Trepied ridica dispozitivul la 1,5 metri, asigurand o propagare a sunetului pe suprafete mai mari. Exploziile se pot regla pe intervale de timp de la 1 min la 30 min. Puterea acustica a exploziilor este constant 120 dB

## GUARDIAN-2 DOUBLE ROTARY

The model with the best protection, recommended for large tracts of land containing crops and fruit trees. Each GUARDIAN-2 can be calibrated independently, to achieve different types of explosions in opposite directions.

RO - Modelul cu cea mai mare zona de protectie, cu trepied la 1.60 - 2.30 metri. Explozii in directii opuse, automat rotinduse 90°

## AUTOMATIC TIMER

The ideal accessory for all GUARDIAN-2 models.

The timer-watch can be used to start and stop the bird scarer automatically at the required times.

RO - Regulator de timp Automat - poate porni si opri Dispozitivul automat, noapte / zi (Optional)
